

NORDIC TRANSDUCER

We do also produce complete customer solutions !

100m distance to instrumentation
by means of 4-20mA transmission

SEIKA SB1i Inclinometers

Portable Control instrumentation

Job here was to measure the different in angle on 2 warship, gun platforms with very high accuracy to see the different as they do turn 360° horizontal, and then adjust the 2 similar to each other.

Indication wanted was one on each of the 2 platform and at the same time the different between them, that's why there is 3 display units.

Indication +/-10° with 0.001° and overall total accuracy better than 0.01°
